Computer Controlled Technical Drying

The humidity levels of all wood used in our productions are reduced to international standard levels in our own furnaces. To reduce the humidity levels the wood is kept in completely computer controlled furnaces continuously, between 60 to 180 days depending on the type of wood for the drying process.

Pressured Impregnation Under Vacuum

With the method that we use in our impregnation establishment, the wood is purified from all insects and bacteria. The rotting of the wood is prevented even if its continuously in contact with water and soil, prolonging its life-span up to 60 years. During this time the wood does not shelter bacteria in anyway.
